

Emblemtek ColorPrint® Emblems Re-branded as SubliPrint™

The ColorPrint® sublimated emblems that we've manufactured for the last 20 years have evolved over time. The printing systems have become less expensive and now utilize faster technologies. The print media has evolved from thermal ribbon to ink jet. And the base material has changed from standard twill fabric to the smooth PennBrite™ material that we've used for the last 10 years.

And now Emblemtek is advancing the product yet again. The printing system is still ColorPrint®, but the emblems that we manufacture are now SubliPrint™! And with this change comes a new expanded colour spectrum, a chart that represents 118 fixed colours which are more closely representative of Emblemtek's embroidered emblem thread colours.

Printed on white material at all times, the shade and tone balances between ink and thread have been greatly improved, so that image colours compare more evenly with thread or merrow border colours. From roughly 66 fixed colours in the past, to 118 standard colours today, the range has been advanced significantly.

At the same time, each SubliPrint™ colour has been tagged with a closely matching Pantone® colour code, making referencing easier. And though it's not feasible to exactly match the thousands of colours within the Pantone® spectrum, it is possible to create custom colours that will come close.

Each SubliPrint™ colour has a unique colour name and 'SU' colour code, with the only limitation being neon and metallic shades which cannot be achieved in the sublimation printing process. We've even included a few legacy colours which continue to be in demand relative to the ColorPrint® printing system.

A new brand name - SubliPrint™ - with an expanded, more closely defined colour range - printing emblems of all sizes and shapes - with standard images and full background colouring - the ability to create colourful emblem designs has been greatly improved!
